

CSA4001-MANAGEMENT INFORMATION SYSTEM FOR DATA OPTIMIZATION

NAME: K.karthik

REG.NO.: 192110178

5) Draw a UML diagram for a food ordering system Systems. The activities of the food ordering system are listed below. Receive the Customer food orders, Produce the customer ordered food, Serve the customer with their ordered food, collect payment from Customers, Store customer payment details, Order Raw Materials for food products, Pay for Raw Materials and Pay for Labour. give for this like previous.

AIM

The aim is to design a **UML Activity Diagram** for a **Food Ordering System** to represent the flow of activities, from receiving customer orders to processing payments and managing raw materials and labor costs.

PROCEDURE:

1. Identify the main activities: **Receive Order, Produce Food, Serve Food, Collect Payment, Store Payment Details, Order Raw Materials, Pay for Raw Materials, and Pay for Labour.**
2. Define the flow between activities, with transitions indicating the order of operations.
3. Identify decision points, such as checking if the order is complete or if raw materials are in stock.
4. Establish actors involved in each activity, such as **Customer** (placing orders and paying), **Cook** (producing food), and **Manager** (handling raw materials and labor payments).
5. Use swimlanes to group activities by actor, such as separate lanes for **Customer, Kitchen, and Management.**

6. Ensure proper branching and synchronization to show the process flow, such as producing food after receiving the order.
7. Finalize the diagram, ensuring all activities are properly connected and all steps in the food ordering process are covered.

OUTPUT:

USE CASE DIAGRAM:

ACTIVITY DIAGRAM:

CLASS DIAGRAM:

STATE DIAGRAM:

SEQUENCE DIAGRAM:

COMMUNICATION DIAGRAM:

COMPONENT DIAGRAM:

RESULT:

The Use Case Diagram for the Coffee Coffee Day Ordering System effectively models customer interactions for ordering and payment, along with service assistant functions for managing recipes and ingredients. It provides a clear representation of system operations, serving as a structured guide for implementation.
