

CSA4001-MANAGEMENT INFORMATION SYSTEM FOR DATA OPTIMIZATION

NAME: K. Karthik

REG.NO.: 192110178

3) Make an Online Airline Reservation System. The activities of the Online Airline Reservation system are listed below: user, admin, LOGIN, MANAGE CLASSES, MANAGE WAITING LIST, MANAGE HOLDS, MANAGE DEADLINES, LOGOUT, using this has a step-by-step process draw a CLASS diagram.

AIM

To develop a Class Diagram for an Online Airline Reservation System, modeling the interactions between Users, Admins, and System Components to manage reservations, waiting lists, holds, and deadlines.

PROCEDURE:

- ☐ Identify the main classes in the system: User, Admin, Flight, Reservation, Seat, Payment, Waiting List, and System.
- ☐ Define the attributes and methods for each class.
- ☐ Establish relationships between the classes, such as one-to-many between Flight and Reservations and User and Reservations.
- ☐ Add inheritance where necessary (e.g., Admin inherits from User).
- ☐ Implement associations such as Admin managing flights, deadlines, and waiting lists.
- ☐ Draw the class diagram, connecting entities with proper multiplicity and associations like aggregation and composition.
- ☐ Verify the completeness and correctness of the diagram, ensuring all system functions are covered.

OUTPUT:

CLASS DIAGRAM:

RESULT:

The Class Diagram for the Online Airline Reservation System successfully models system components, their attributes, and relationships. It clearly defines User, Admin, Flight, Reservation, Seat, Payment, and WaitingList interactions, ensuring a structured framework for system design and implementation.
