

# CSA4001-MANAGEMENT INFORMATION SYSTEM FOR DATA OPTIMIZATION

NAME: K.karthik

REG.NO.: 192110178

2) Draw a coffee day ordering system. A coffee day shop vending machine dispenses coffee to customers. Customers order coffee by selecting a recipe from a set of recipes. Customers pay for the coffee using coins. Change is given back, if any, to the customers. The 'service assistant' loads ingredients (coffee powder, milk, sugar, water, chocolate) into the coffee machine. The 'service assistant' adds recipe by indicating the name of the coffee, the units of coffee powder, milk, sugar, water, chocolate to be added as well as the cost of the coffee. The service assistant can also edit and delete a recipe. Develop the use case diagram for the specification above.

## **AIM**

To develop a Use Case Diagram for a Coffee Coffee Day Ordering System, modeling interactions between Customers and Service Assistants with a vending machine for ordering, payment, and recipe management.

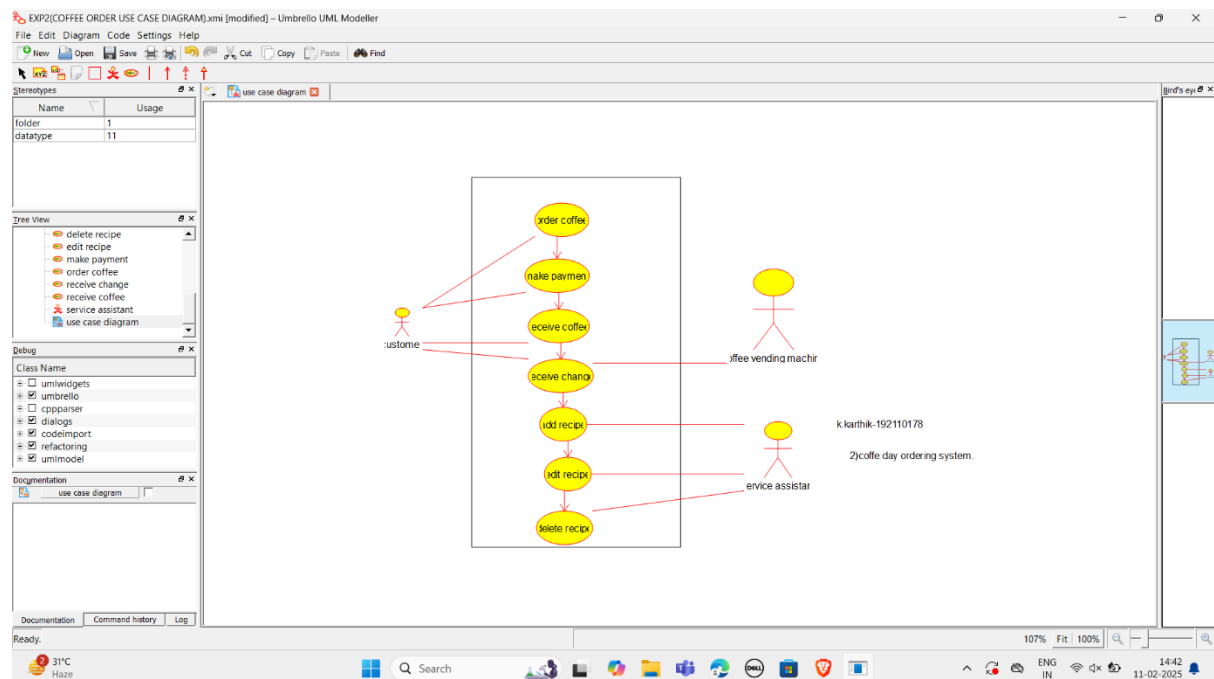

## **PROCEDURE:**

- ☐ Identify actors: Customer (orders and pays for coffee) and Service Assistant (manages ingredients and recipes).
- ☐ Identify key use cases: Select Recipe, Make Payment, Receive Coffee, Receive Change, Load Ingredients, Add Recipe, Edit Recipe, Delete Recipe.
- ☐ Define relationships: Receive Coffee includes Make Payment; Receive Change extends Make Payment; Service Assistant manages recipes and ingredients.
- ☐ Draw the system boundary labeled Coffee Vending Machine, placing actors outside and use cases inside.

- ☐ Connect actors to their respective use cases using association lines to represent interactions.
- ☐ Use include and extend relationships where necessary, such as Receive Coffee including Make Payment.
- ☐ Verify the completeness and correctness of the diagram to ensure accurate representation of functionalities.

## OUTPUT:

### USE CASE DIAGRAM:

## RESULT:

The Use Case Diagram for the Coffee Coffee Day Ordering System effectively models customer interactions for ordering and payment, along with service assistant functions for managing recipes and ingredients. It provides a clear representation of system operations, serving as a structured guide for implementation.
